

Navajo County Central Area Transportation Study - Comment Form

Holbrook Open House - December 16, 2009

The project team wants to hear from you regarding transportation connectivity and economic development opportunities, and needs your help to identify community mobility needs. The meetings are an opportunity to bring together communities, public officials and citizens to identify and balance the diverse needs throughout the county.

The study will result in a county-wide transportation plan that coincides with the previous and current efforts by the Arizona Department of Transportation for access management, transit, freight and safety. Goals include integrating multi-modal needs, understanding safety and capacity needs, and providing a freight movement plan.

1) Do you have transportation concerns that should be addressed as a part of this study?

2) Are there improvements that are displayed that you do not support? _____ Why?

3) Do you support the potential for an additional railroad crossing? Do we have the right locations shown?

4) Are there other comments regarding transit that you would like to provide?

5) Are there other comments regarding freight that you would like to provide?

6) Are there other comments regarding safety or access management that you would like to provide?
