# ARIZONA HIGHWAY USER REVENUE FUND

## OFFICIAL FORECAST UPDATE

### RISK ANALYSIS OF EXPECTED VALUES

#### Introduction

This document presents the forecast of expected values for the Arizona Highway User Revenue Fund for the period FY 2016-2025, as prepared by the Arizona Department of Transportation.

#### Background

The State of Arizona taxes motor fuels and collects a variety of fees relating to the registration and operation of motor vehicles in the state. These collections include gasoline and use fuel taxes, motor carrier fees, vehicle license taxes, motor vehicle registration fees and other miscellaneous fees. These revenues are deposited in the Arizona Highway User Revenue Fund (HURF) and are then distributed to the cities, towns and counties of the State and to the State Highway Fund, which is administered by the Department. These taxes and fees represent a source of revenues available to the state for highway related expenses.

Since 1986, the Department has estimated highway user revenues using a comprehensive regression-based econometric model. In 1989, the model was updated by Dr. Alberta Charney of the University of Arizona. The model relied on the estimates of certain “independent variables” to predict future tax revenues. Any variability between estimated and actual values could lead to variances in the tax forecast. In order to deal with this variability, the Department introduced the Risk Analysis Process (RAP) in 1992. The RAP relies upon probability analysis and the independent evaluation of the model’s variables by an expert panel of economists. This results in a series of forecasts with specified probabilities of occurrence, rather than a single or “best guess” estimate.

In 1997, Hickling Lewis Brod Inc. (HLB), working in conjunction with Dr. Dennis Hoffman of Arizona State University, developed a new forecasting model to incorporate certain economic data generated over the past ten years and evaluate the inclusion of independent variables absent from the 1989 model, to enhance the model’s forecasting accuracy. The new model also took into consideration 1997 legislation which eliminated the weight distance tax on motor carriers, increased weight and use fees for use class vehicles, and changed the point of taxation on fuel.

In September 2000 and 2003, HLB reviewed the model and updated the equations. The independent variables contained in the model in 2003 included Arizona Real Income Growth Per Capita, Population Growth, Wage & Salary Employment Growth and Fleet Fuel Efficiency.

In 2005, HDR\HLB developed a new forecasting model to incorporate additional economic data that would enhance the model’s forecasting accuracy. The Arizona Real Gross Domestic Product Growth independent variable was added to the model to incorporate the impact of the Arizona economy on the commercial registration activities.

In September 2008, HDR\HLB reviewed the forecasting model and added the Arizona Real Gas Price Growth independent variable to improve the model’s forecasting accuracy for changes in Arizona gasoline consumption. In September 2009, HDR\HLB reviewed the forecasting model and added

the West Coast No. 2 Real Diesel Price Growth independent variable to improve the model's forecasting accuracy for changes in Arizona use fuel (diesel) consumption. In September 2011, the income, gross domestic product, gas price and diesel price variables were converted to nominal dollars at the request of the panel members from the August 2010 RAP panel meeting. The September 2011 RAP panel recommended the Arizona nominal Gross Domestic Product independent variable be eliminated from the model. The current model includes:

1. Arizona nominal personal income
2. Arizona population
3. Arizona non-farm employment
4. Arizona fleet fuel efficiency (Not part of RAP Process)
5. Arizona nominal gas price
6. West Coast No. 2 nominal diesel price

### **Risk Analysis Panel**

The Risk Analysis Process relies heavily on the judgments of an expert panel of economic and financial participants to provide information critical to the forecasting process. In August 2015, a panel of ten economic and finance experts representing public, private, and academic sectors submitted their individual estimates of the model's independent variables and comments on the future economic outlook. The information gathered from the panelists was input into the model to produce a series of forecasts with associated probabilities of occurrence. The panelists' inputs are reflected in the attached tables at the back of this report.

### **Model Results**

This year's panel inputs produced a mean forecast of \$16,065.0 million for the period FY 2016-2025 with a compound growth rate of 3.8 percent.

The Department's Official Forecast for FY 2016-2025 amounts to \$15,605.3 million with a compound growth rate of 3.5 percent. The Official Forecast incorporates the 50 percent confidence interval for all revenue categories. The FY 2016 forecast of \$1,331.0 million was developed in July 2015 by ADOT staff using time-series techniques, historical and projected growth rates and recent legislative changes.

### Summary

The Department's Official Forecast for FY 2016-2025 totals \$15,605.3 million, an increase of \$247.4 million from the September 2014 Official Forecast. The Risk Analysis Process panel members were pessimistic about the Arizona economy with only modest growth expected going forward. The panel was more conservative with their growth estimates for personal income and employment growth and expect higher fuel prices in FY 2017 and beyond when compared to last year's panel inputs. The main reason for the increase in the September 2015 revenue forecast over the September 2014 revenue forecast is stronger than expected FY 2015 revenues which set a higher revenue base for the FY 2016 forecast and beyond.

### Supplementary Information

The remaining pages of this report present supplementary information on the detailed results of the Risk Analysis Process, the Department's model and the values of the independent variables forecast by the expert panel. While the Official Forecast period is FY 2016-2025 panel inputs were requested for FY 2016-2020, 2025, 2030 and 2035. Data displayed for other than the requested years has been extrapolated.

**NOTES:**

FY 2016 HURF estimate based on July 2015 Forecast.

FY 2017-2025 HURF estimate based on September 2015 Official Forecast.

/1. The DPS/ESP includes \$1 million for Economic Strength Project (ESP) each year.

**The DPS transfer in FY 2016 is \$96.410 million per Laws 2015, 1st Regular Session, Chapter 8, (SB 1469) and \$10 million each year thereafter, which is subject to change.**

In addition, Laws 2014, 2nd Regular Session, Chapter 9 (SB 1487) appropriated \$30 million in FY 2015 and FY 2016 and \$60 million in FY2017 to cities, towns and counties. A portion of these monies are distributed to the state highway fund for projects in Maricopa and Pima counties (Counties over 800,000). The distribution of SB 1487 appropriations are included in the columns ADOT 50.5%, Cities/Towns 27.5%, Cities over 300,000 3% and Counties 19%.

Per Laws 2015, 1st Regular Session, Chapter 10 (SB 1471) the \$60 million appropriation for FY 2017 in Laws 2014, 2nd Regular Session, Chapter 9, (SB 1487) is reduced to \$30 million.

FY 2016 also includes a \$652,700 appropriation to MVD for the registration compliance program/3rd Party programs.

/2. Per Laws 2005, Chapter 306 (SB 1119), 1.51 percent of the state highway fund share of HURF VLT is transferred to the DPS Parity Compensation Fund.

/3 Net of the DPS Parity Compensation Fund transfer and includes transfers per Laws 2011. 1st Regular Session, Chapter 28 (SB 1616) which transfers the state highway fund share of HURF VLT difference between the two-year registration and the five-year registration to the state general fund. Laws 2010, 7th Special Session, Chapter 12, (HB 2012) an amount equal to 90 percent of the fees collected under 28-4802 (A) and 60 percent of the fees collected under 28-4802 (B) shall be transferred from the state highway fund share of HURF VLT to the state general fund.
