Figure: Plan and elevation drawings of an embankment slope with details of reinforcement bars. The figure includes labels and dimensions for various construction elements, such as 'c' bars, 'd' bars, and anchor bolts. The construction details are symmetrical about an axis. Notations are provided for specific bar configurations and placement. The drawings also indicate the location of joint fillers and the shape of the embankment profile. For a comprehensive overview, additional notes and details are referenced. The figure is part of a detailed engineering analysis and construction guide for embankment slopes.
